Babies eat. A lot. For mothers who may care, the American Academy of Pediatrics currently recommends that infants be fed breast milk exclusively for the first six months after birth. The best breast pumps allow nursing mothers to pump milk without being tied to wires, tubes and bottles, and wearable breast pumps free them to feed tiny people, as well as do other things. Finding the best breast pump for working moms is very important because it allows them to actually multitask as well as produce more milk in less time. Electric breast pumps are the most common choice among nursing mothers because they have an engine that does the job for them. Moms can choose for a battery pump, or one that connects to the wall, or both. To get the most milk in the least amount of time, women can get a double pump that draws milk from both breasts at the same time. Many of today's fancy pumps have a so-called closed system: This means that milk does not circulate through a tube or pump engine, thus keeping things simpler and more hygienic. If mom is primarily breastfeeding but needs a pump to use in some cases, a guide is a good option. For moms who prefer to work in loud mode while working or while playing with a child, they can choose a pump like a willow, which is spill-proof and placed directly into the bra, without any dangling wires. The best Breast Pumps Spectra Prime Electric Breast Pump How popular is this pump? Let's just say if it was a man, many nursing moms would marry him. Spectra, which has a sleek profile and weighs just under three pounds, is a true workhorse. Moms report that it completely empties the chest (it works like a double or one pump) and it's also pretty quiet with lots of customizable settings. It can choose to use the battery or plug it in, and its small size makes it good for storage at work. The pump uses a closed system, meaning the milk remains completely separate from the skinny pipes (so there is no need to deal with the nightmare of sterilizing it). It's not officially wearable, but it can be paired with the Freemie Closed Cup Collection System set and eliminate the entire bottle-flank setup. Night light and timer are handy extras it will come to appreciate. Medela pump-style breast pump with MaxFlow Medela's newest breast pump has an engine that generates micro-vibration to increase milk production. It has 10 adjustable vacuum levels and a closed system. You can use it either with the battery, or by plugging it into the socket. Medela Freestyle Flex breast pump Pretty many established gold standards in breast pumps, Medela is designed for The new Medela breast pump weighs just one pound, which means it can go anywhere. It's small. He's mighty. It is designed for moms who pump several times a day, and has a closed system that stops breast milk from getting into the tube. It has a rechargeable battery and bluetooth bluetooth connection MyMedela app. Elvie Double Silent Wearable Breast Pump Another wearable breast pump, Elvie is one of the quietest on the market, although it is not silent. It's perfect for use while the baby is napping, or while the mom is at a conference. It wears inside a bra, and has only 5 parts for easy cleaning. The app tracks the volume of milk in real time. The pump itself is rechargeable and has an automatic shutdown when it fills the container. BabyBuddha breast pump weighing less than two ounces, Baby Buddha, which would be ideal for travel, is more like a smartphone or work ID icon than a breast pump. The pump hangs around its neck with a lanyard and connects to two traditional bottle-flank settings, so it's not considered wearable like Elvie or Willow. However, it's a tiny little one that works using a closed system and is quite powerful given its size, although some moms find it less effective than a larger pump like Spectra. Ameda Mya Portable Hospital Breast Strength Pump This breast pump is so quiet and so small it is absolutely perfect for pumping on the go. The best part about this breast pump, apart from its super-quiet engine and the fact that it fits into your wallet or pocket, is that it has a built-in battery that gets two hours between charges, so you can pump without the need for a power adapter. In addition, this breast pump has 10 unique levels of expression mode and five levels of massage mode. Moms rave that it empties your breasts for a few minutes. Motif Luna Double Electric Breast Pump The Luna is a pump to use if you need to produce more milk in less time because moms swear by its quiet, efficient energy. The moon is a closed pump system, meaning the tube remains clean. It has a built-in LED night light for midnight pumping that won't wake up a sleeping baby. Moms get one or two pumping options. It weighs only two pounds, so it's ultra-portable. Bellababy Double Electric Breast Pump This electric breast pump runs from the battery, with a backup battery, so moms never come out of juice, and comes with an LCD display that tracks their pumping. We like that this ultra-affordable breast pump comes with a rechargeable battery, so it's perfect for working moms who need to pump during the day and don't need the hassle of always finding an electrical outlet. Haakaa Manual Breast Pump This hand-held breast pump does all the work for you. You are just sucking it into your chest and the milk is flowing. It is incredibly soft and is made of high-quality food silicone. This is especially ideal for plane rides, road trips and other excursions. Oh, and it's safe for the dishwasher. Just note that some users that it does not provide enough suction. Willow Wearable Double Hands-Free Electric Breast Pump wear it, and forget it: This may well be the motto of a shiny willow. The updated version of this next generation breast pump has a slower, softer pumping rhythm for added comfort. Its intelligent suction technology is regulated based on its own preferences, so that no need to press buttons or play with any settings. The app gives her personalized pumping tips. But the name of the game here is convenience. It pumps directly into storage bags or reusable containers. Even better, it can attach the pump to each breast, and use it without having to deal with wires, cords, or any dangling containers. It's great to use at work, at home, or even in the park. Culturally competent care is an attractive e-learning program designed to help you build cultural and language-related knowledge and skills. He's accredited for nurses. This e-learning has been revised! It is now offering the latest research and resources, including the HHS Office for Minority Health Advanced National Standards for Culturally and Linguistically Appropriate Services (CLAS) in Health and Health. The e-learning program also has a new website with updated graphics and interactivity! Culturally competent nursing: The cornerstone of care is a free e-learning program from the HHS Minority Health Authority. It is accredited for up to 9 continuing education loans, free of charge, for nurses. This e-learning program is designed to help you provide culturally and linguistically competent care. Cultural and linguistic competence is the ability of individuals and organizations to work effectively and communicate in an intercultural situation. Cultural and linguistic competence can help improve the quality of care for patients from different cultures. This e-learning program is based on national standards of culturally and linguistically relevant health and health services (CLAS). These standards are designed to promote health equality, improve quality and help address health disparities. CLAS National Standards provide you and other health professionals with a plan to improve cultural and language competence. Ensuring effective and respectful care for our increasingly diverse population is of paramount importance to the ANA. The OMH curriculum offers nurses the most comprehensive programme on culturally literate patient care. Rebecca M.
